Elementary Enrollment and Student Record Management System

Description:

The Elementary Enrollment and Student Record Management System is a software that is tailored specifically to facilitate an efficient enrollment process for elementary school. The program focuses on the implementation of an easy-to-access interface ensuring seamless access to vital information for not only the students but to the educators, parents, and administrators, enhancing most school operations.

Key Features:

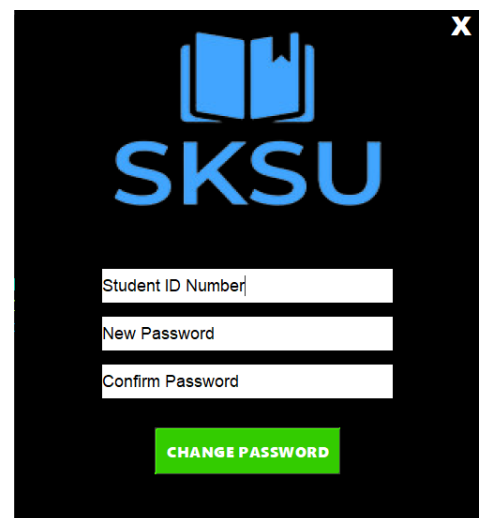

- **Flexible Login System**
 - Implementing a flexible login system in the project allows users to regain access to their designated accounts even in the event of forgotten passwords. They can utilize their unique ID number to initiate the password reset process and establish a new one. This feature enhances user convenience and ensures account recovery.

The login interface features the SKSU logo at the top. Below it, there are two input fields: 'Student ID Number' and 'Password', each preceded by a blue circular icon (a person for ID and a lock for password). A green 'LOGIN' button is positioned below the fields. At the bottom, there are links for 'Forgot Password?' and 'Create Account'.

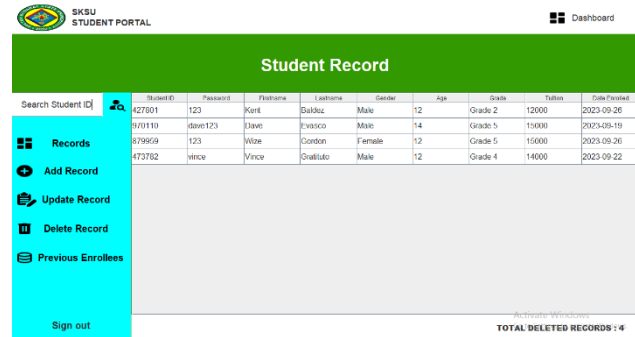

The signup interface features the SKSU logo at the top. Below it, there are four input fields: 'Firstname', 'Lastname', 'Password', and 'Age'. There are also two dropdown menus for 'Sex' (with 'Male' selected) and 'Grade' (with 'Grade 1' selected). A green 'SIGNUP' button is positioned below the fields. At the bottom, there is a link for 'Back to Login'.

The change password interface features the SKSU logo at the top. Below it, there are three input fields: 'Student ID Number', 'New Password', and 'Confirm Password'. A green 'CHANGE PASSWORD' button is positioned below the fields.

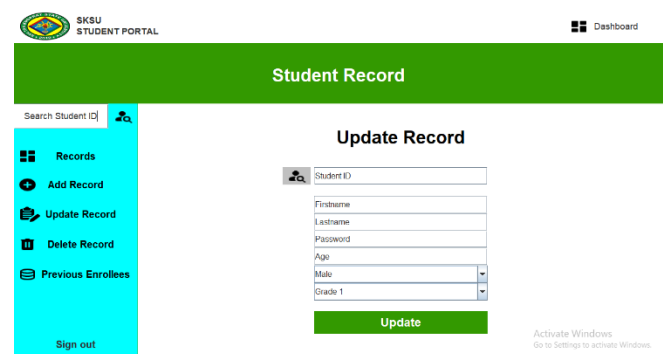

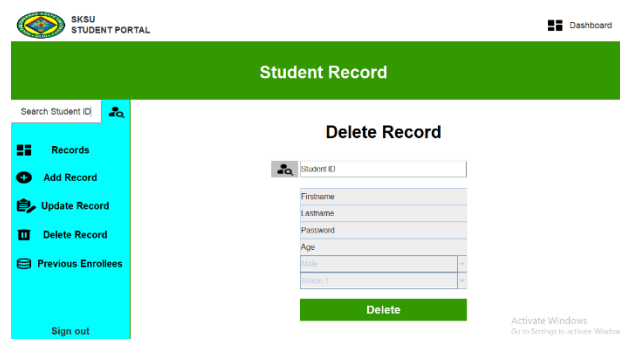

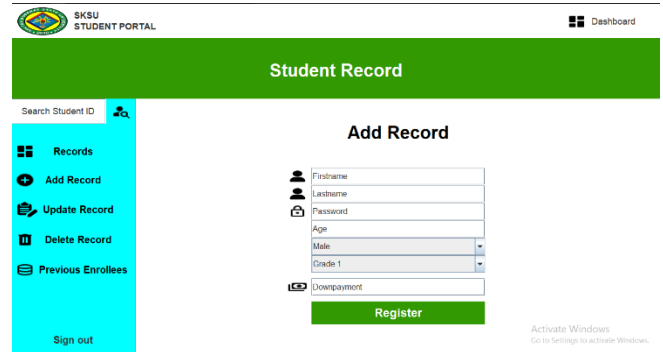

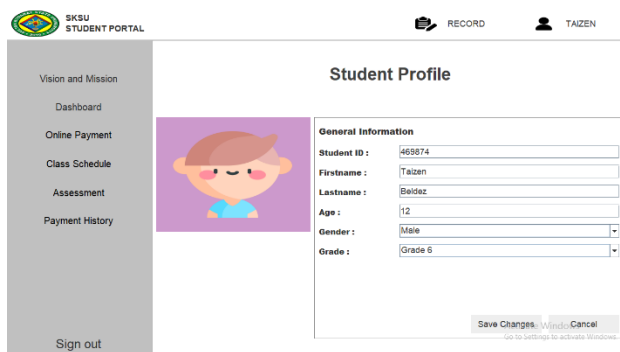

- **Efficient Data Access**

- The system provides a straightforward interface for the user to interact and navigate throughout their needed information with ease.

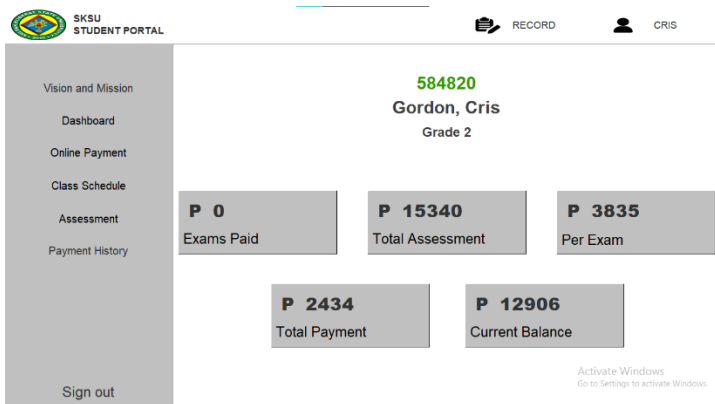

- **Efficient Student Record Manipulation**

- As for the administrator from the specified school, they could easily navigate and manipulate student data record or could be able to track an active and inactive account of the student.

- **Personal Transaction Tracking and Local payment**

- The user can track their transactions within the school using either the hard copy of the specified payment or from their payment history.
- If the user may not be able to directly pay to the school, they could simply decide to make their transaction with the local payment implemented within the system.
